Education

University of Illinois Urbana-Champaign (UIUC)

GPA: 3.81, May 2028

Bachelor of Science in Computer Science, Honors Program

National Merit Scholar, National Cyber Scholar, James Scholar, and Matthews Scholar

Relevant Courses: Data Structures, Computer Architecture, Machine Learning, Statistics, Software Development

Experience

Software Engineering Intern

Google

May 2026 - August 2026

- Architect and implement a significant design change to the Android Auto interface to optimize layouts and provide core action controls for over 100 million daily active users.
- Author a comprehensive technical design document outlining architecture, automated testing strategies, and API integration, securing alignment and approval from senior engineers across the organization.
- Made 22 changes to production code within the first 2 months of the internship to add features, fix bugs, and reduce technical debt, significantly outpacing the initial project timeline.
- Complete an additional stretch project to make the product universally accessible for users around the globe.

Associate Software Developer Intern

Google

May 2025 - August 2025

- Designed and implemented a user-facing feature for the Android Phone App's Calling Card for over 600 million daily active users and over 7 billion daily calls.
- Engineered (end-to-end) a transformative feature used for Android's production code, working closely with UX designers and tech leads to iteratively develop a positive user experience.
- Gained proficiency with multi-threaded applications, data services, and state management, as well as navigating internal tools and Google's 2 billion line codebase.
- Created an internal API accessible across the Android Phone App's teams that will make it easier for applications to support accessibility for Android's ~800 million color blind and low-vision users.

Software Research Intern

Loyola University Chicago

May 2024 - August 2024

- Developed a Flask web application allowing researchers to evaluate and optimize the efficiency of their computer vision models on a cluster of low-powered devices, facilitating resource-constrained AI development.
- Contributed to a published research paper on the security risks of popular machine learning model hubs such as HuggingFace, bringing awareness to the risks of open-source artificial intelligence.

Projects

Louvre CTF

January - May 2025

Developed a Capture The Flag cybersecurity challenge to introduce cybersecurity concepts to a young audience. This was developed end-to-end using Flask in a team of four.

AI Mini-Projects

January 2025 - May 2026

Created a series of miniature Python applications featuring AI models made from scratch, including a language prediction model, an image generation model, a facial tracker, and an image quantizer, using Numpy.

Crop Counter

January - May 2025

Developed, compared, and presented various AI tools and techniques to help Brazilian agronomists weigh castor bean pods from an image, allowing resource-constrained family farmers to estimate yields and optimize agricultural planning.

Technical Skills

C++, Java, Kotlin, Python, HTML/CSS/JS, Git, Version Control, Streamlit, Flask, Pandas, Android Studio, Compose

Other Awards

Lenora Moragne Scholarship Recipient, HSHacks winner, Desmos International Graphing Art Contest finalist
