## Education

University of Illinois Urbana-Champaign

GPA: 3.81, May 2028

**Bachelor of Science in Computer Science**; Art History minor

- **National Merit** Scholar, National Cyber Scholar, **Honors** Program, Matthews Scholar, Lenora Moragne Scholar
- Relevant courses: Machine Learning, **Software Development**, Designing with **AI Agents**, Data Structures

## Experience

Software Engineering Intern

Google

May 2026 - August 2026

- Designed, implemented, and drove the first stage of launch for a significant change to the Android Auto interface that will optimize layouts and provide core action controls for over **100 million active users**.
- Authored a comprehensive technical **design document** outlining architecture, automated testing strategies, and API integration, securing alignment and approval from senior engineers across the organization.
- Made **50 code changes** in **Kotlin**, **Java**, and **GCL** to production code over the course of the internship to add features, fix bugs, and reduce technical debt, significantly outpacing the initial project timeline.
- Architected and tested new files to create Android Auto easter eggs using **agentic workflows**, for an organization-wide hackathon. One submission won a prize and was added to production code.

Associate Software Developer Intern

Google

May 2025 - August 2025

- Designed and implemented a user-facing feature for the Android Phone App's Calling Card project, which was released to over **600 million daily active users** and over **7 billion daily calls**.
- Engineered (**end-to-end**) a transformative feature used for Android's **production code**, working closely with UX designers and tech leads to iteratively develop a positive user experience.
- Worked with multi-threaded applications, data services, and state management, as well as navigating internal tools and Google's **2 billion line codebase**.
- Created an internal API accessible across the Android Phone App's teams that will make it easier for applications to support accessibility for Android's **~800 million** color blind and low-vision users.

Software Research Intern

Loyola University Chicago

May 2024 - August 2024

- Developed a **Python**/Flask web application allowing researchers to evaluate and optimize the efficiency of their computer vision models on a low-powered device cluster, facilitating **resource-constrained AI development**.
- Contributed to a published research paper on the **security risks** of popular machine learning model hubs such as HuggingFace, bringing awareness to the risks of open-source artificial intelligence.

## Leadership Experience

Officer

AQE STEM Sorority

October 2024 - Present

- Elected for **chair positions** (Engineering Open House, Technology, Professional, Engineering Outreach), and selected as Assistant Membership Education Director (managing a class of 30 incoming members).
- Created an AI photobooth using **Vertex API** to teach kids how to identify different forms of artificial intelligence.
- Planned, organized, and executed over **20 engineering and professional development events**, such as visits to local schools to teach kids about engineering and resume review workshops with recruiters.
- Updated the organization's **website** and created internal tools to simplify organization and internal processes.

## Recent Projects

Developer

IRL Subway Surfers

August 2026

- Worked with HTML/CSS/JS, MediaPipe, Canvas 2D, and WebRTC to create a game like Subway Surfers that **tracks users' movements** to allow them to physically dodge obstacles by jumping, weaving, and squatting.

Developer

Character Chrome Extension

August 2026

- Published a **Chrome extension** that makes a character (Seattle's Jimothy the raccoon) run across the screen.

## Technical Skills

**Languages:** C, C++, Java, Kotlin, Python, HTML, CSS, JavaScript

**Libraries:** Steamlit, Pandas, Vertex, MediaPipe, WebRTC, Jetpack Compose

**Tools:** VSCode, Android Studio, Vim, Git
